FINANCIAL TECHNOLOGY LABORATORIES

PURPOSE-BUILT FOR FIXED-INCOME

BONDHUB

The connectivity layer for fixed-income technology.

Connect trading venues, clearing firms, market data, pricing, internal systems and proprietary applications through one configurable integration foundation.

BondHUB helps firms reduce point-to-point complexity by creating a common layer between internal applications and the external fixed-income ecosystem.

CONNECT. **NORMALIZE.** **ORCHESTRATE.**

CORE CAPABILITIES

INTEGRATED. FLEXIBLE. FUTURE READY.

One integration foundation across the fixed-income stack.

Trading Venue Connectivity
Connect internal applications and workflows to multiple trading venues and execution destinations.

Clearing Connectivity
Integrate clearing firms and downstream trade-processing relationships through configurable interfaces.

Market Data & Pricing Connectivity
Connect pricing providers, market-data sources, reference data and other inputs to the systems that consume them.

Enterprise Connectivity
Integrate internal risk systems, proprietary applications, spreadsheets, OMS platforms and other enterprise technology.

APIs & Developer Tools
Extend BondHUB capabilities into in-house applications and workflows through APIs and developer interfaces.

BUILT BETWEEN YOUR SYSTEMS AND THE MARKET

Reduce point-to-point integration complexity.

Internal Applications & Workflows
OMS platforms
Trading applications
Internal risk systems
Proprietary applications
Spreadsheets

→ **BONDHUB**
Connectivity · Normalization · Orchestration →

External Market Infrastructure
Trading venues
Clearing firms
Market data
Pricing providers
Reference data
Other configurable destinations

BondHUB provides a common integration layer so every internal system does not have to maintain its own individual connections to every external provider.

DESIGNED FOR COMPLEX ENVIRONMENTS

Connect more. Manage less complexity.

Normalize Connections
Create more consistent interfaces across different vendors, venues and data sources.

Centralize Integration Logic
Reduce the amount of connectivity logic embedded across individual applications.

Adapt as Infrastructure Changes
Add, replace or reconfigure external connections without rebuilding the surrounding environment.

Support Multiple Workflows
Use a shared connectivity foundation across coming, analytics, data and downstream processing.

Talk with FTLabs about BondHUB.
Simplify connectivity. Extend your infrastructure. Modernize with less disruption.

FINANCIAL TECHNOLOGY LABORATORIES

PURPOSE-BUILT FOR FIXED-INCOME

BONDHUB

Connect across systems without creating more point-to-point complexity.

A configurable integration layer for the technology environment your firm already operates.

Fixed-income firms rarely start with a clean technology stack. BondHUB is designed for environments where established market systems, internal applications, vendor platforms and proprietary technology all need to work together.

BUILT FOR IT TEAMS

Extend the environment without forcing wholesale replacement.

Interoperate with established market infrastructure
BondHUB can operate alongside Bloomberg and other systems already embedded in the firm.

Connect existing clearing relationships
Integrate current clearing firms without requiring a change in provider.

Use existing pricing and data sources
Continue using established market-data, pricing and reference-data providers while extending how those inputs move across the organization.

Integrate proprietary technology
Connect internal applications, risk systems, models, spreadsheets and other in-house tools through a common integration layer.

INTEROPERABILITY ACROSS THE FIXED-INCOME ECOSYSTEM

Connect the technologies your business depends on.

Trading & Market Connectivity
- Trading venues
- ATSs
- Execution destinations
- OMS platforms
- Internal trading applications

Clearing & Post-Trade Connectivity
- Clearing firms
- Trade processing
- Downstream reporting
- Settlement workflows
- Other configurable destinations

Data & Enterprise Connectivity
- Pricing providers
- Market-data providers
- Reference data
- Internal risk systems
- Spreadsheets
- Proprietary applications
- APIs

AN ABSTRACTION LAYER FOR CHANGE

Modernize individual connections without redesigning the entire stack.

BondHUB separates external connectivity from the applications that depend on it.
That means firms can evolve vendor relationships, add new destinations or change integration requirements with less impact on surrounding systems.

Add a new venue.
Extend connectivity without rebuilding every consuming application.

Change a provider.
Modify the integration layer rather than rewriting downstream systems.

Connect a new internal application.
Give it access to existing market infrastructure through the same foundation.

Standardize across workflows.
Reduce duplicated integration logic across the enterprise.

BUILT FOR REAL-WORLD FIXED-INCOME INFRASTRUCTURE

Experience. Interoperability. Control.

20+ years
of fixed-income technology experience.

Vendor-Neutral
connectivity across multiple providers and infrastructure environments.

Configurable
interfaces and integration workflows that adapt to different operating models.

Modular
architecture that supports incremental change rather than wholesale replacement.
