

DataLattice™

Turn complex documents into usable data.

AI document intelligence with source traceability.

Extract information from complex documents, validate results and preserve links to the source. DataLattice makes structured information available for downstream systems and analytics.

EXTRACT IT.

Identify relevant terms across complex documents and variable source formats.

VALIDATE IT.

Apply domain-specific checks and retain the source context behind each result.

USE IT.

Deliver structured, reusable data to applications, analytics and workflows.

CORE CAPABILITIES

STRUCTURED. TRACEABLE. REUSABLE.

Built for the way your teams work.

Document extraction

Find terms and facts across documents and filings.

Data validation

Apply field rules and domain checks to extracted data.

Structured outputs

Normalize information into consistent data models.

Source traceability

Connect results to supporting source material.

Reusable framework

Support multiple applications with one technology layer.

DOCUMENT WORKFLOW

From source documents to usable data.

01

Identify sources

Prepare source PDFs, filings and associated material.

02

Extract information

Find the facts and terms needed for the data model.

03

Validate results

Apply checks, normalize values and link to source.

04

Deliver data

Make outputs available to systems and workflows.
